TRANSFER (WHAT IS IT) Heat  
transfer is the flow of thermal  
energy driven by thermal  
nonequilibrium (i.e. the effect  
of a non- - uniform temperature  
field), commonly measured as a  
heat flux (vector), i.e. the  
heat flow per unit time (and  
usually unit normal area) at a  
control surface. The aim here  
is to understand heat transfer  
...

The heat transfer by natural convection and by radiation are compared. Longwave radiation may also be absorbed and emitted by a gas. A small portion of the radiation that crosses a room is absorbed by the room air and by water vapor, or CO<sub>2</sub>. Depending on its temperature, the so-called participating gas emits radiation diffusely into all directions. Gas radiation may have an effect in air with ...
